National Logistics Company Opens State-of-the-Art Facility in Greer, South Carolina *ProTrans, a logistics industry leader, has expanded to a 230,000 square foot facility in GSP International Logistics Park*

Indianapolis, Indiana – ProTrans, a national logistics management company, has expanded to a new location in Greer, South Carolina. The 230,000 square foot facility is located in GSP International Logistics Park at 410 Global Commerce Drive. ProTrans worked with CenterPoint Properties on securing the new facility. The company will celebrate with a private grand opening event on Thursday, February 22 featuring remarks from Michael Murphy, Chief Development Officer of CenterPoint Properties, Rick Danner, the Mayor of Greer, South Carolina, and Craig Roeder, ProTrans CEO.

The Greer facility, which sits on 20 acres, can accommodate 137 trailer positions and 80 auto parking spots for customers and employees. The facility's location provides ProTrans with immediate access to the South Carolina Inland Port (SCIP), which is served by Norfolk Southern. The Greer facility is also conveniently located next to BMW's recently expanded 6.5 million square foot manufacturing campus, the second largest production facility in the world.

"While we have had a presence in Greer for years, our new facility will bring significant efficiencies that will support our growing customer base and service offerings," said Shawn Masters, Chief Commercial Officer at ProTrans. "With this new expansion, we are also bringing new jobs to the area, including account relationship managers, account logistics managers, supply chain managers, material handlers, and more."

The Class-A 230,256 square foot building includes a 6,600 square foot standard office, 2,900 square foot warehouse office in the center of the building, and a driver check-in. The entire cross-dock facility is 853 feet long by 270 feet deep, with 60-foot speed bays, 88 dock doors, and 2 drive-in doors, all meant to support high-velocity operations.

Designed to maximize operational efficiencies, both inside and out, the Greer facility will improve the flow of material, and ultimately, the speed in which customer's freight is processed. This facility was modeled after ProTrans' Laredo, Texas location, and incorporates many of the same energy efficient features, including a white roof, which reflects, rather than absorbs, the heat gain from the sun.

"ProTrans is committed to continuing its growth here in the United States," stated Shawn Masters, Chief Commercial Officer at ProTrans. "We currently have over 1,000 employees throughout North America and we are always looking for ways to grow and expand into new markets."
